HIGH PERFORMANCE RUBBER SURFACE

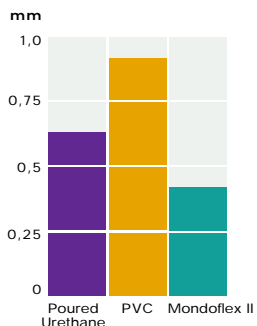

- **Solid rubber surface layer** provides unparalleled durability and life cycle costs against all other surfaces. Designed to withstand heavy foot traffic and abuse of multipurpose activities.
- **Vulcanized rubber is a strong and durable material; our surface layer will last longer than any other surface available on the market.**
- **Requires no coatings** and can be maintained with straightforward regular maintenance. Due to the natural characteristics of rubber, maintenance changes little with age, making it unique in contrast to all other synthetic surfaces.

LOAD DISPERSION LAYER

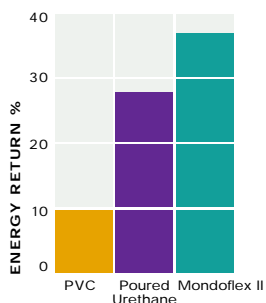

- Improves the safety and durability of the system.
- Improves the biomechanical properties of the system by performing like an area elastic system (extending the area of foot impact); greatly reducing the chance of injury for the athlete.
- Increases the ability to withstand static load indentation of tables and chairs in multipurpose applications.

RESISTANCE TO INDENTATION

ENERGY RETURN

RESILIENCY MONDOFLEX II VS. POURED URETHANE AND PVC

PROPRIETARY BLENDED UNDERLAYMENT

- The backbone of the system, **engineered to deliver a combination of performance, safety and comfort.**
- A three dimensional cross linked foam constructed with only high quality material in order to produce a system that **returns outstanding shock absorption and energy return.**
- Due to its unique composition, the system returns **maximum dimensional memory and load capacity.**
- Due to its natural resilience and its comfort underfoot, it makes sports and other applications safer and more enjoyable.
